Process Solutions International™

No matter the processing problem, PSI has the solution.

Dewatering Systems

Key Benefits -

- *Customized to your application*
- *Containerized or open air unit*
- *Air conditioning and heating*
- *Environmentally safe*

Dewatering Systems

PSI Dewatering Systems are designed to reclaim water or oil from drilling fluid waste. They separate water from suspended solids through chemical and/or mechanical means and then recirculate it, cutting out the wasted time and expense of bringing clean water onsite and of disposing of the now reduced amount of solid waste.

PSI Dewatering Systems are available in Class 1 Div 2 up to 250 gpm.

For more information on our products, Please contact us at 7519 Prairie Oak Drive Houston, TX 77086

Process Solutions International™

No matter the processing problem, PSI has the solution.

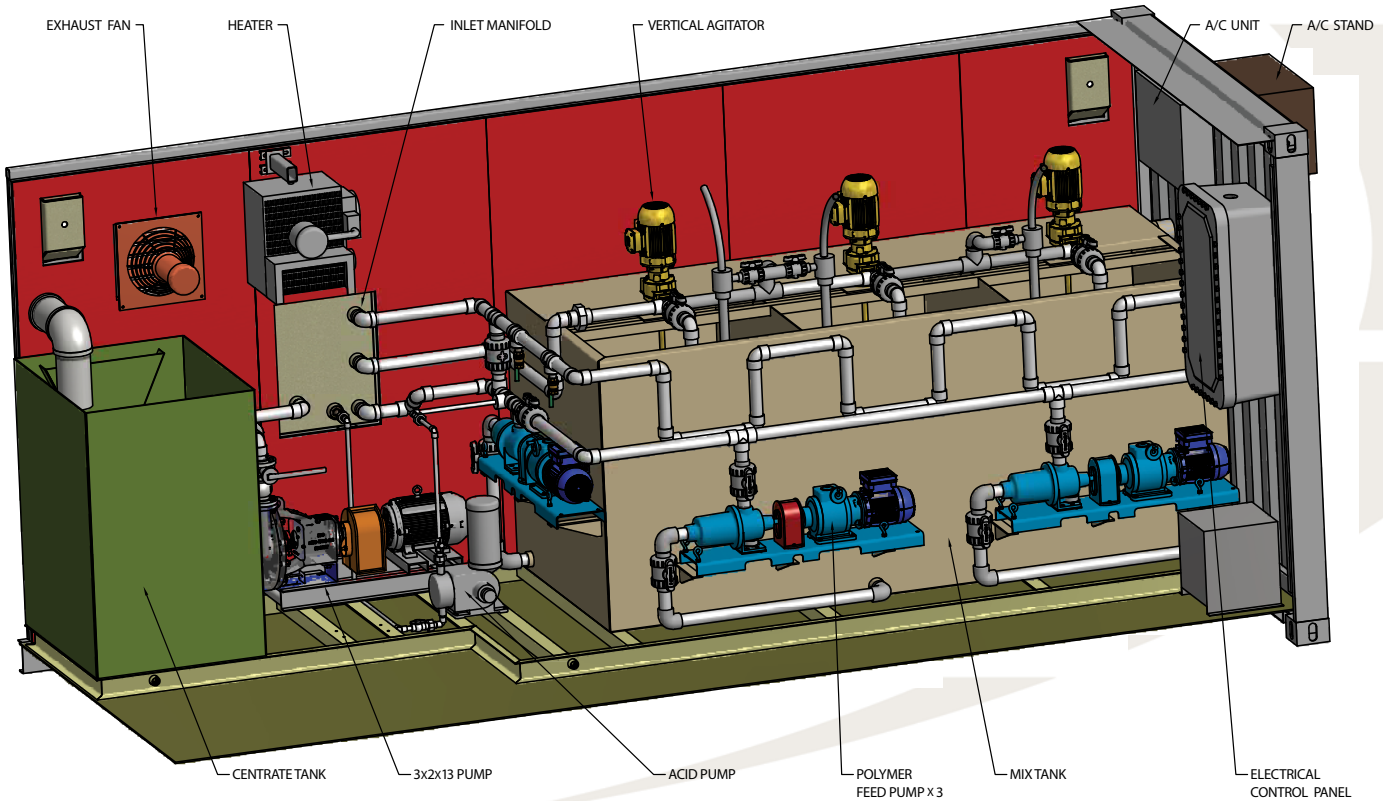
Dewatering Systems

MADE IN U.S.A
HOUSTON, TEXAS

Problem Solving -

In this global marketplace, we have expanded our operating scope by adding international stocking distribution locations to support both our Houston, Texas manufacturing location and our clients who operate in all corners of the globe. Using this model, we are able to supply equipment quicker, more efficiently and at an economically beneficial level to the user. With The Port of Houston being minutes away, we are able to accommodate customers throughout the world.

All Weather Containerized - 250 gpm



In short, dewatering units use less water and recycle existing water, thereby reducing the amount of waste needing disposal and minimizing the environmental impact of that waste.
